Abstract (en)

[origin: ES8403900A1] Indolizine derivatives corresponding to the general formula: < IMAGE > and the pharmaceutically acceptable acid addition salts thereof, wherein: R represents a straight- or branched-chain alkyl radical having from 1 to 4 carbon atoms or a phenyl radical, R1 represents a straight- or branched-chain alkyl radical having from 1 to 6 carbon atoms, X1 represents hydrogen, chlorine, bromine, methyl or methoxy, A represents a radical of the formula: < IMAGE > in which X2 represents hydrogen, chlorine, bromine, methyl or methoxy, n represents 1 or 2, a process for preparing said derivatives, pharmaceutical or veterinary compositions containing at least one of said derivatives and a method of treating pathological syndromes of the heart by administration of at least one of said derivatives to a subject in need of such treatment.

Abstract (fr)

L'invention se rapporte à de nouveaux dérivés d'indolizine de formule générale: <IMAGE> ainsi qu'à leurs sels d'addition non toxiques dans laquelle: R représente un radical alkyle linéaire ou ramifié, ayant de 1 à 4 atomes de carbone ou un radical phényle, R1 représente un radical alkyle, linéaire ou ramifié, ayant de 1 à 6 atomes de carbone, X1 représente hydrogène, chlore, brome, méthyle ou méthoxy, A représente un radical de formule: <IMAGE> dans laquelle X représente hydrogène, chlore, brome, méthyle ou méthoxy, n représente 1 ou 2. Les dérivés d'indolizine de l'invention possèdent des propriétés inhibitrices de la translocation calcique les rendant utiles dans le traitement de syndromes pathologiques du coeur.
