Abstract (en)
[origin: EP0098501A2] The joint (11) has at least one first and one second pin bearing (17, 21, 35a or 35b) which are pivotable about a hinge pin (39). The latter has a radially extending part (41) which can engage into a recess (23) in the first pin bearing (17, 21) and which is secured via a stop (32, 34) on the second pin bearing. To the second pin bearing (35a, 35b) can be fastened a window (2, 3) which is thus pivotable about the hinge pin and which can be removed after an appropriate rotation of the hinge pin, so that the projecting part comes out of the recess (23) and a pulling-out from the pin bearings. <IMAGE>
