Abstract (en)

[origin: EP0098528A2] 1. A refuse receptacle, in particular of plastics material, having a refuse space bounded by a base and side walls and edge profilings (4) extending along the upper edges of the side walls, the edge profiling on at least one side wall (5) (receiving side wall) having a cavity (12) (receiving cavity) accessible from below for the engagement of a gripping means which comprises recesses and carrying edges extending between the recesses, characterized in that guide faces (9a, 10a; 24, 25; 32, 33; 39, 40) and/or guide edges (20, 21) for cooperating with the gripping means (G) are arranged in the region below and/or inside the receiving cavity (12) in such a way that if the refuse container is incorrectly orientated along the gripping means (G) the side edges of the recesses (A) of the gripping means (G) slide along the guide faces (9a, 10a; 24, 25; 32, 33; 39, 40) and/or the guide edges (20, 21) and thus orientate the receptacle laterally.
