Abstract (en)
[origin: EP0098950A2] The edge-grinding machine has a grinding disc (13) and a motor (7, 8) which drives the latter. The object of the invention is to provide a constructionally simple and cheap machine which is space-saving and maintenance-friendly, has a beneficial behaviour during operation and can also be used to carry out additional operations, preferably grinding, in particular by hand. For this purpose, provision is made that the motor (7, 8) is an external-rotor motor and the grinding disc (13) is fitted directly on the rotating rotor (7). <IMAGE>
