Abstract (en)

The invention relates to a machine for automatically packaging cable or hose into coils, constituted by a frame carrying three operational units, namely a first cable feed unit provided with means for its horizontal and vertical movement and with means for inserting the end of the cable into a reel forming part of a second winder unit which also comprises a second reel cooperating with a third coil binding and labelling unit, said reels alternately interchanging their position and function, and being able to expel the bound and labelled coil, suitable means being provided for accomplishing the described movements.
