Abstract (en)

[origin: US4576613A] The present invention relates to a process for confining the pollution in an area with the aid of a gaseous jet. The gaseous jet is formed by a transition zone and a full jet development zone, the transition zone having a dart. The latter is given a length equal to the range of the jet and the first gaseous jet is controlled by a second gaseous jet on the opposite side of the area compared with the first jet. Application to the confinement of areas containing toxic or radioactive products.
