Abstract (en)

[origin: EP0100064A1] 1. An apparatus for the sound insulating closure of the opening of a machine housing, said opening being provided for the delivery and removal of material being processed in said machine, characterized in - that a flexible mat (18, 36, 136, 236) or the like is disposed within said opening (16, 34), said mat overlapping said opening and resting with a rim portion (20, 38, 138, 238) against the housing wall (22, 40, 140, 240) defining said opening ; - that at least said rim portion (20, 38, 138, 238) is magnetically polarized ; and - that said housing wall (22, 40, 140, 240) associated with said rim portion (20, 38, 138, 238) includes means (26, 42) which are able to take selectively a polarization which is equal with or neutral, or opposite, respectively, to the polarization of said mat (18, 36, 136, 236).
