Abstract (en)
[origin: WO8302721A1] A hydraulic lifting device (7, 8), comprising a seat or bed (9, 10) moveable between a position adjacent to the tub (1) and a position inside the tub, is mounted on a support frame (4) of the tub (1) by means of beams (3). The hydraulic lifting device comprises essentially a vertical hydraulic cylinder (7) fixed to the frame and a piston rod (8) which carries at its upper end the carrier elements (9) of the seat or bed. The support frame (4) is formed at least partially with hollow elements (5) intended to receive the hydraulic fluid, substantially water, supplied to the hydraulic cylinder (7) by means of an assembly of electro-hydraulic motor pumps (6).
