Abstract (en)
[origin: EP0100847A2] 1. Mine for combating of land vehicles, in particular tanks, with active charge (2) arranged in a housing (1a, 1b) actuable by means of an ignition arrangement releasable by a mechanical/electric pressure sensor, characterised in that the mine housing (1a) possesses a preferably circular flat region (3) designated as sensor surface, which region is formed as a membrane in thin relation to the thickness of the housing (1a) and the flexing of this region (3) occurring as a consequence of external stressing being determinable by means of an electromechanical transducer connected with the region (3).
