Abstract (en)
[origin: US4517061A] The process includes an electrochemical reduction, under carbon dioxide atmosphere, of benzyl type ArCH_2X or $\text{ArCH}(\text{CH}_3)\text{X}$ halogenides. According to the invention, the process consists of operating in the presence of a catalyst containing at least one organometallic complex derived from a transition metal combined with a bidentate or tetradentate coordinate.
