Abstract (en)

A containing device for collection items such as postage stamps, coins and the like, having an inner (2) and an outer (3) holder member, each comprising transparent quadrangular front covers (4, 11) and back covers (5, 12), and two linear spacer elements (6, 7; 13, 14) interposed between said front (4, 11) and back (5, 12) covers along two mutually opposed sides thereof. A first cavity for locating items (C) to be stored having two open side ends (9, 10) is thus defined between the front cover (4) and the back cover (5) of the inner holder member (2). A second cavity is defined between the front cover (11) and the back cover (12) of the outer holder member (3) for slidably receiving the inner holder member (2) with the spacer element (13, 14) of the outer holder member (3) facing the open side ends (9, 10) of the first cavity (8).
