Abstract (en)

[origin: EP0101022A1] 1. A wall consisting of prefabricated and assemblable components, in particular for acoustic and visual protection, comprising a plurality of shaped planks (1) which are arranged parallel and substantially horizontally and in mutually displaced relationship and which are connected by superposed support brackets (2) lying transversely with respect to the planks (1), the planks (1) each having an outside and an inside surface, wherein the support brackets (2) are fitted positively into the inside surface of a plank (1) at suitable peripheral portions and in addition each support bracket (2), at its upper edge forms a support for the next higher plank, said support being adapted to the outside dimensions of the subjacent portion (4, 5) of the plank (1), characterised in that : - the planks (1) comprise metal or correspondingly thin-walled plastics material, - each support bracket (2) interconnects a respective pair of adjacent planks (1) of different heights, - the support for the next higher plank (1) is formed as an opening (10) in the upper edge of the support bracket (2), and - an end contour edge portion of the support bracket (2) has at least partially the same profiling as the inner profiling of the plank (1).
