Abstract (en)

A method of making a photographic panel, comprising the steps of making at least two photographic prints of the same size from the same negative, applying adhesive to their surfaces and onto one side of a transparent base, and laminating the base and a first one of said photographic prints so that the respective adhesive-applied surfaces are face-to-face, thereby bonding the two together. The backing sheet of the first photographic print is then removed and the second photographic print is bonded to the already bonded photographic print so that images of both photographic prints are aligned with each other, and the backing sheet of said second photographic print is removed. Three or more such photographic prints may be laminated and bonded successively onto the base. A superior visual effect is obtained when viewed by either reflected or transmitted light.
