Abstract (en)

[origin: US4640995A] A connection member between a given number of  $n$  distinct parallel paths ( $V_1$  to  $V_n$ ) and a common path ( $V_0$ ) comprises, for establishing the  $2n$  distinct combinations of connections between this common path and the  $n$  distinct paths,  $2n-1$  connection arms distributed along a circle around the central part of the member in  $2n-1$  positions among  $2n$  possible positions. The  $2n-1$  positions are chosen such that the successive switching steps along a circular path of this member establish successively each of these  $2n$  distinct combinations of possible connections between the common path and the  $n$  parallel paths.
