Abstract (en)  
This invention provides a sheath (B) that is made for enclosing a selected member of the wearer, for example a limb and that is contoured to embrace the enclosed member, the sheath (B) being formed from foam rubber so as to retain the heat of body temperature in the member thus enclosed. Moreover, the sheath (B) has on its interior surface, muscle-supporting ribs (20) or pads which are disposed to bear against and support the muscle structure of the wearer in its proper location to the bone or bones in the enclosed member.
