Abstract (en)

[origin: EP0102448A1] 1. Apparatus for the insertion of an elastic sealing strip with an at least substantially round cross-section into a joint, in particular a joint of a structure, characterized in that at least one roll-on disc (5, 5') is rotatably mounted in a stand (21, 25, 26) and has a blade-like edge (6), which dips into the joint (1) which is to be sealed and thereby rests with one side surface as reference surface against a wall of the joint (1) which is to be sealed and rests with the other side surface against the sealing strip (4) to be inserted, from the direction of the blade-like edge, and inserts this strip by unrolling it on the opposite wall of the joint (1), and that at least one ratchet wheel (11) is provided for the inserted sealing strip (4), which wheel is arranged on the side (8) of the roll-in disc (5, 5') facing away from the reference surface, and at least partially overlaps the edge region of the rollin disc (5, 5') rotating out of the joint (1).
