Abstract (en)
[origin: EP0102454A2] In the carrier for beamed yarns, in particular for use on tufting machines, the beamed yarns run from one or more warping beams into the respective machine for processing. Each carrier (1) has only one warping beam (2) and can be brought into positive connection in the vertical direction with the feet (3, 3a) of other carriers. On its one bearing receiving side (8, 8a) it has an adjustable braking device (4) for the warping beam (2). <IMAGE>
