Abstract (en)

[origin: EP0102464A1] A device for an easy quick refloating of an anchor, comprising among other components a shank (7), to one end of which two arms (8) are engaged as made integral by the crown (2), in which the operating or anchoring rope or chain (5) is connected to one end of said shank (7) at the anchor ring (12), characterized in that the anchoring rope or chain (5) is secured to the anchor also at the crown (2), while the connection of said anchoring rope or chain (5) with the anchor ring (12) occurs through engagement means (40) brought to a disengagement position by disengagement means (41), applicable when required from the boat, for coupling with one of the constituting elements (15) of the engagement means (40) to disconnect said rope or chain (5) at the anchor ring (12) and leave the same connected to the anchor (3) only at the crown (2).
