Abstract (en)  
[origin: US4567614A] A seating or sleep furniture piece having a frame in which an upper portion is pendularly suspended from a lower stationary portion supported on the floor. The upper portion supports the seating or sleep support surface for a user and allows for comfortable pendular and sleep-inducing or restful movements. The pendulum lengths may be adjusted to vary the pendulating effects, or the frame portions latched together to prevent relative movements when desired by a user.
