Abstract (en)  
[origin: CA1201413A] An article display stand, particularly for sheet-like data carriers, has a substantially horizontal bottom plate with an outer edge, and at least two pairs of substantially vertical lateral walls arranged on the bottom plate and forming at least two upwardly open elongated compartments for accommodating objects in an upright position and provided with object withdrawing openings in the region of the outer edge of the bottom plate, wherein the lateral walls of each of the compartments approach one another in direction toward the respective withdrawing openings, so that each of the compartments forms an angle in direction of its elongation, and the withdrawing openings of the two compartments are located near one another.
