Abstract (en)

A liquid filling nozzle comprising a rectangular tubular member having an inward projection on each of opposite sides of its upper end, a strainer held in the interior of the rectangular tubular member at the lower end thereof, a strainer holder provided on the strainer and having a circular aperture in its upper portion, an internally threaded member formed in each of opposite sides of its lower end with an outwardly open groove having the projection fitted therein, and a hollow cylindrical nozzle main body having an externally threaded portion screwed in the internally threaded member and a projecting edge fitting in the circular aperture. Preferably the rectangular tubular member has an inner periphery and an outer periphery which are square in horizontal section. Further preferably, the outer periphery of the tubular member is slightly tapered.
