Abstract (en)

[origin: WO8301406A1] An operating member indispensable for starting or operating an apparatus (1) actuated by a force, for example by a motor or pneumatically, forms a tool holder (4). A tool appropriate for the maintenance, cleaning or the like of the apparatus (1), preferably a tool set, is fixed undetachably to the tool holder (4), the operating member forming the tool holder being, however, mounted removably on a functional element (2, 3) of the apparatus (1). Thus, the tool may not be lost after having used it since the possibility to operate the apparatus (1) (starting, operation by the user) is given only after mounting the operating member forming the tool holder (4).
