Abstract (en)

[origin: EP0103058A2] 1. Device for the attachment of one end of a wooden lath (5) to the member (6) of a supporting frame, comprising a rigid wire having a plane part (3) forming a support for the end of the lath (5) and an attachment part designed to hook onto the said member (6), characterised in that the said attachment part (1) has a curved profile corresponding to that of the member (6) and terminates in an end (2) in the form of a hook which engages in an opening (7) of the external part of the said member (6) and in that the plane part (3) is continued by a part (4) in the form of a loop.
