Abstract (en)

[origin: US4529448A] Yellow to orange-red bismuth oxide-chromium oxide mixed phase pigments having a specific surface from about 1 to 10 m²/g and the composition Bi_{2-x}Cr_xO₃ wherein x is from about 0.05 to 0.5 are produced by mixing the appropriate quantities of finely disperse bismuth-(III)- and chromium-(III)- or chromium-(VI)-compounds, calcining the mixture in air at a temperature from about 500 DEG to 800 DEG C. and subsequently grinding. The products are suitable for pigmenting lacquers, plastics and dispersion dyes.
