Abstract (en)
[origin: EP0103510A1] 1. Shotgun with removable scope (5) fixed by a pivot (4) of eccentric type, engaged and locked in a recess (3) provided in the rib (1) welded to the shotgun barrel (2) wherein the recess (3) for the pivot (4) is used as a guide chamber for a rear sight (9) of the disappearing type, likely to assume two positions, one sunk inside the recess (3), under the pressure applied by the pivot pin (4) when it is introduced into the recess, the other raised with respect to the shotgun barrel after removal of the scope, whereby the rear sight automatically passes from the first to the second position under the bias of a pushing means (11) and is limited in its lifting stroke by abutting means 91 /12).
