Abstract (en)

[origin: EP0103760A2] A climbing form for shuttering concrete walls is disclosed, above the upper working platform of which a shuttering board rests on approximately vertical supports. The vertical supports are mounted pivotably about a horizontal axis lying within the frame of the climbing form in such a way that the shuttering board is moved in a circular arc upon displacement between its service position and its set-back position, and passes over a dead centre. <IMAGE>
