Abstract (en)

[origin: EP0103925A2] The apparatus automatically applies a sealing compound along the contour of an assembled but unfinished glazed insulating window or door panels of the type constituted by at least a pair of equal glass panels mounted on the opposing sides of at least a section spacer frame to which said panels are joined by means of adhesive. The apparatus comprises two guns for injecting the sealing compound, capable of controlled rotary and linear movements and cooperating with conveyor means to apply the sealing compound on the four edges of the panel.
