Abstract (en)

[origin: EP0104135A2] 1. Arrangement for connecting components (3; 15; 22; 23; 25) such as hooks, lugs, shackles, fork-heads, shortening claws, connecting pins and connecting forks, and tensioning and/or control devices (24) of hoisting and/or lashing arrangements, each with a load transmission string guided through a receiving orifice of a coupling member (2), to which the particular component (3; 15; 22; 23; 25) or the particular tensioning and/or control device (24) is connected, the particular component (3; 15; 22; 23; 25) or the particular tensioning and/or control device (24) being equipped with a neck (5) and a head (4) adjoining the latter, and an insertion slot (7) for the particular neck (5) opening into the receiving orifice of the coupling member (2), characterized in that the load transmission string is formed by a belt (1), and the receiving orifice is formed by at least one belt-receiving slot (8), the clear height (H) of which is such that, when the neck (5) is inserted into the insertion slot (7), the particular head (4) fits through the belt-free belt-receiving slot (8), whereas, when the belt (1) is connected to the coupling member (2), the said head (4) is locked in the coupling member (2) by means of the belt (1).
