Abstract (en)

[origin: EP0104392A1] The invention relates to a method of producing nodular iron and to a machine for carrying out this method in foundry practice. The problem on which the invention is based is the improvement of the nodular iron processing method carried out in a tundish-cover-system and a machine for implementing this method. The problem is solved by adjustably controlling the pouring of molten iron into the processing tundish (6) or ladle by means of a pressure tap stationary furnace (1).
