Abstract (en)
[origin: EP0104428A2] 1. Sub-structure for a wall or ceiling cladding with bearer rails (1) or panels (1) adapted to be fixed to the wall or ceiling and having assembly slots (14, 15) into each of which it is possible to engage a substantially S-shaped supporting hook (16, 17) of which the first arm of the S (21) engages behind the bearer rail and is adapted to bear against a surface (9, 10) which is directed at the wall or ceiling, the middle portion (20) of the S and the second arm (22) of the S which engages around the edge of a cladding panel or the like being associated with the opposite other face (23) of the bearer rail (1) being in particular pressed thereon in springingly elastic fashion, characterised by, extending in the longitudinal direction of the one face (9, 10) of the bearer rail (1), a depression (11), particularly a longitudinal groove, the assembly slots (14, 15) being marginally open and associated with the depression or intersecting the longitudinal groove, the first arm (21) of the S engaging in locking fashion into the depression (11) or longitudinal groove.
