Abstract (en)
[origin: EP0104680A1] A talus coating for a dike or a similar embankment protection comprising blocks of concrete or a similar material (1), the interstices between the blocks being filled out with granular material whereby the blocks have a quadrangular section, two adjoining side faces of the blocks being substantially flat and the other two adjoining side faces having each several recesses (6) extending throughout the height of the blocks, the depth of a recess gradually increasing from the edges towards the middle of the recess, whilst the blocks are disposed in the coating in a manner such that a side face of a block having a recess is in contact with a flat side face of a neighbouring block.
