Abstract (en)

[origin: EP0104710A2] A container 1 comprises a series of successively disposed compartments, and is provided with a displaceable cover 3 having an opening for providing accessibility to one compartment. Apart from its normal direction of displacement, the cover 3 is additionally displaceable in a direction perpendicular thereto, by the provision of a zig-zag shaped groove 11 with saw-tooth-shaped flanks 12, 13 which prevent an undesired opening by little children.
