Abstract (en)

[origin: EP0105045A1] The equipment comprises mainly a fixed frame with a connector holder and two opposite mounted insertion units provided with insertion punches and which are able to be displaced along the connector holder by means of a carriage, the extremity of each insertion unit being provided with wire guiding means in which at least one wire guiding means is movable mounted so as to obtain a passage or gap between the guiding means which can be adapted to the size or kind of wire to be inserted in the connector.
