Abstract (en)
[origin: WO8303356A1] A catheter with distal and proximate balloon segments (8, 9) expandable to produce a chamber around arterial plaque and a conduit (7) for delivering solubilizing liquid into the chamber. The catheter may also contain a central expandable balloon (10) to assist in forcing the liquid into the plaque and to compress the plaque. Several solubilizing liquids are described.

Abstract (fr)
Un cathéter comprend des sections distale et proximale gonflables (8, 9) pouvant être gonflées de façon à créer un espace fermé autour d'un caillot artériel, et un conduit (7) pour injecter un liquide dissolvant dans cet espace fermé. Le cathéter peut aussi comprendre une section gonflable centrale (10) pour aider la pénétration du liquide dans le caillot et pour comprimer le caillot. L'invention porte sur divers liquides dissolvants.
