Abstract (en)
[origin: EP0105538A1] 1. Elektric socket or connector strip made of plastic, for tapping electric current off live conductors by means of plug pins (5), the live conductors being held by means of elastic retaining webs (3) made in one piece with, and of the same plastic material as, the base unit and at least one earth bracket (1) being attached next to the live conductors with their phases (2) inside the electric socket or connector strip, the electric socket or connector strip being characterized in that the phases (2) of the live conductors and the earth brackets (1) are at least on one side overlapped over their lenght by retaining noses (4) of the retaining webs (3), and the retaining webs (3) are pushed out of their rest position slightly outward while retaining their fixing properties, when the plug pins (5) are pushed in between the phases (2).
