Abstract (en)  
This invention relates to bleaching compositions. More particularly, this invention relates to bleaching compositions that provide effective and efficient solution bleaching and/or surface bleaching performance on textiles. Such bleaching performance is obtained over an extremely wide class of stains and soils and a wide range of bleaching solution temperatures and pH. The bleaching compositions within the invention contain a carboxylic acid and an aromatic sulfonyl halide bleach activator. In a highly preferred embodiment the bleaching compositions within the invention are detergent compositions.
