Abstract (en)

[origin: EP0105795A2] This device comprises a mould (1, 2), with a shape adapted to the geometry of the vessel (C), made from several elements to permit free expansion of the mould during use, means (3, 4, 5) for supporting and handling the mould (2, 3), means (6, 14) for centring and securing the mould with respect to the vessel (C) so as to arrange, between the inner wall of the vessel (C) and the mould, a space intended to receive the refractory concrete and means (7, 8, 11) for supplying the said space with refractory concrete. <IMAGE>
