Abstract (en)

A hydraulic, pneumatic, oleodynamic cylinder or the like, comprises a tubular liner (1) defining a chamber closed by end heads (2); the liner (1), in correspondence with its end portions, presents an annular shoulder element which fits into a centering seat in the side wall (5) of the head (2) and a threaded locknut (8) is screwed against the annular shoulder element of the liner (1) and inside the wall (5) of the head (2).
