Abstract (en)
[origin: EP0106068A1] 1. Apparatus for shearing fabrics having a shearing cylinder provided with shearing helices, disposed above a support for the width of material and formed as a hollow cylinder, whose inner chamber is connected to a suction device producing an underpressure in this chamber and whose jacket is provided with air inlet apertures, characterised in that the suction device comprises at least one fan (22), whose rotor is connected to the shearing cylinder (10) in a rotationally fixed manner in or to the region of the front end area (19) of the shearing cylinder (10).
