Abstract (en)

[origin: EP0106165A1] 1. Method for applying relief plastering with joints on a surface, wherein : (a) a network (14 ; 34) of lands (20, 22 ; 40, 42), made of moisture-resistant material and corresponding to the structure of joints, is applied to the surface by means of a removable adhesive layer, apertures (12 ; 32) being formed between these lands, (b) a plaster (50) is subsequently applied to the surface (48) provided with the network (14 ; 34), and (c) next, the network (14 ; 34) is pulled off the surface (48) such that in the areas of the apertures (12 ; 32), projecting surface portions, and in the areas of the lands (20, 22 ; 40, 42), receding joint-like surface portions are obtained, characterized in that (d) the network (14 ; 34) adheres by means of the removable adhesive layer to a width-shaped continuous carrier film (16 ; 36) also covering the apertures (12 ; 32), (e) to apply the network (14 ; 34) to the surface (48), the carrier film (16 ; 36) is pulled off on one end (46) from the network (14 ; 34) and this end (46) is stuck to the surface (48), (f) the carrier film (16 ; 36) is then pulled off further to the same extent as the network (14 ; 34) is pressed onto the surface (48) with the adhesive layer.
