Abstract (en)
[origin: EP0106535A2] An electrical distribution track has an elongate duct containing exposed conductors which may be mounted on or in a wall. The duct has an opening which may receive an electrical accessory to make contact with the conductors at any point and is provided with cover means which cover the whole of the opening and surrounding parts of the duct. The cover means may be snap fitted to supporting brackets or to the duct itself. When assembled the whole of the duct is protected from damage or penetration of unwanted materials by the cover means.
