Abstract (en)  
A display sign of novel appearance is described in which the display plates (20) are formed of a profiled and rolled sheet material. In addition to the enhancement in appearance, the construction employs plates (20) having significant structural rigidity with the result that the framework (14, 16) supporting the plates (20) and the internal lights (18) need not itself be substantial. Cut-outs (32) are formed in the sheets (20) and mouldings of acrylic material (not shown) are mounted in these cut-outs (32), the mouldings being in a contrasting colour. If the edges of the mouldings remain translucent then a particularly attractive halo effect is obtained around the logo or lettering when back lit.
