Abstract (en)

1. Device for the adjustment, during casting, of a mould for the continuous casting of products of rectangular cross-section, comprising two small sides (7) inserted between two large sides (2, 3) and means of clamping the large sides, which are capable of being released to adjust the small sides (7) to a desired width, characterized in that the means of clamping the large sides (2, 3) comprise clamping means located respectively at an upper level (9) and a lower level (10), and separate means, adjustable differently, for controlling the relaxation of the pressure exerted respectively by the upper clamping means (9) and by the lower clamping means (10).

Abstract (fr)

Dispositif de réglage en cours de coulée, des petits côtés (7) d'une lingotière à brames. Des dispositifs de serrage (9, 10) permettent de relâcher, pendant le réglage, la pression exercée sur les grands côtés (2, 3). L'installation est équipée de moyens permettant de régler différemment les dispositifs de serrage supérieurs (9) et les dispositifs de serrage inférieurs (10).
