Abstract (en)

In an improved trailer connecting running gear for attachment to tractor drawn trailers, recreational vehicles and the like, the running gear (20) is slidably affixed to a trailer frame (17) and is held in a forward or rearward position by a double fifth wheel (40). The frame (17) is vertically supported along substantially the entire overlapping portion of the trailer frame (17) and the running gear (20). The running gear (20) is held to the trailer frame (17) so that it does not turn with respect to the frame.
