Abstract (en)

[origin: US4358572A] A process for the preparation of a drag reducing substance which comprises: (a) a transition metal catalyst slurry containing: 1. crystalline titanium halide having the general formula TiX_n where $n=2.5$ to 3.0 and X is halogen, 2. a hydrocarbon diluent, and 3. an ether; (b) a co-catalyst; (c) alpha-monoolefinic hydrocarbons containing from 2 to 30 carbon atoms under suitable polymerization conditions providing for an ultrahigh molecular weight polymer that is soluble in hydrocarbons; and (d) ceasing the polymerization at a polymer content of 20 percent by weight or less.
