Abstract (en)
[origin: EP0108184A1] 1. Moored flying toy helicopter (1) with a minimum of one electric motor (2) and a minimum of one rotor (3), moored by an arm (5, 6, 7, 8, 9, 10) connected with a restraining base (15) and traversable on the arm around the restraining base (15), characterized by the arm being formed by two parallelograms (5, 6, 7, 11, 12) with changeable angles arranged in a row in such a way that these parallelograms produce a common side (7), that the side (6) parallel to the common side (7) of the one parallelogram is coupled to the toy helicopter (1), and the side parallel to the common side (7) of the second parallelogram consists of 2 sections (11, 12) coupled by hinges, attached to the restraining base (15) and designed as a pivoted control lever tiltable and rotatable in all directions.
