Abstract (en)
[origin: EP0108537A1] A packaging element (1) formable into a container having at least a base and sides perpendicular to the base which comprises at least one layer of stiff material (3) lined on at least one side with a thin flexible material such as plastics (2,4). The thin flexible layer of material extends about the outer periphery of the stiff material and parts thereof are used as flaps to secure a container formed from the packaging element in an erected condition. Several embodiments of the packaging element are disclosed including elements formable into open containers and containers which include lids.
