Abstract (en)

[origin: EP0108633A2] A method to obtain a substantially pure and stable hLH-hCG receptor from gonadal cells is disclosed. The characteristics of the purified receptor are disclosed. The receptor, in addition to being used as receptor in an enzyme- or dye-receptor assay for hLH and/or hCG, can be used to purify hLH or hCG used in the preparation of standard dye-hormone or enzyme-hormone complexes. These complexes can be used in enzyme- or dye-immunoassays, as well as the receptor assay.
