Abstract (en)

[origin: EP0109030A1] 1. Process for dyeing, with water-insoluble disperse dyestuffs, fiber material which consists of or contains low-flammable linear phthalic acid esters with co-condensed phosphorus-containing chain members, which comprises using, as colorants, disperse dyestuffs which contain in the molecule at least one highly polarized grouping of the vinylsulfone type bonded to an aromatic nucleus of the chromophore, and fixing these dyestuffs on the fiber from an aqueous dispersion at pH 5-10 by means of heat.
