Abstract (en)

[origin: EP0109258A2] A back supporting cushion for use as a loose cushion on seats, comprising a rigid backing sheet (1) and a body of resilient material disposed against said backing sheet for location against the back of a sitter and having a central area (2) which in its upward extension is convexly curved on its surface remote from the backing sheet (1) and two upwardly extending side supports (3), one on each side of the central area and which project forwardly of the central area. The central area (2) preferably is in the form of three adjoining and vertically extending sections, the two outer sections (5 and 6) being similar and the central section (4) extending higher than the two outer sections (5 and 6). Preferably the side supports (3) are of a harder material than the central area (2).
